LEDCOM International Showcased Its Smart City Technology at the Intelligent Community Forum in New York.

11 June 2019

Ledcom International's CEO, Mauro Tosi, was invited to present the company's technology, with particular reference to the CellLED® project, at the prestigious "Intelligent Community Forum" (ICF) in New York (www.intelligentcommunity.org/summit_2019). The three day event was focused on the positive or negative impact that the high-tech giants have on the smart cities development and what it means for the citizens.

Ledcom's presentation generated a great interest, especially from the numerous Canadian and American municipality representatives attending the conference, not least due to the energy saving aspect of the revolutionary LED driver.

"We are pleased to be able to showcase our products, and to notice that some of the investors and venture capital funds share our ideas on the future of 5G and its integration with the street lighting infrastructure" commented Mauro Tosi at the end of his presentation.

About LEDCOM International

LEDCOM International S.r.l. is a leading manufacturer of lighting control gear, lighting wireless controls and smart city applications. Its LED drivers are recognized as the top quality control gear in the market and, among other advantages, they stand out for their capability to integrate inside the same form factor wireless communication functionality at multiple frequencies without additional external boxes. Through its CellLED® project, LEDCOM is also turning the street lighting system into a pervasive next generation mobile communications infrastructure.
