LEDCOM International Showcases Its CellLED® Technology at IEEE PowerTech Milan 2019.

24 June 2019

Ledcom International was invited to present its CellLED® technology and business plan at the “Power Tech Milano 2019 – Leading Innovation for Energy Transition” event, organized by IEEE and Politecnico di Milano.

Numerous were the questions from the attendees, who were intrigued about Ledcom’s idea about an alternative 5G network, in order to solve its current shortcomings. “There is no question about the need for 5G, but it will be different from what is being promoted today. At Ledcom we believe that the 5G technology will be fundamental as a virtual aggregator of network services, but we also believe that the physical access infrastructure could be better developed through micro cell solutions like CellLED®’s”, stated Ledcom’s Chairman & CEO Mauro Tosi.

About LEDCOM International

LEDCOM International S.r.l. is a leading manufacturer of lighting control gear, lighting wireless controls and smart city applications. Its LED drivers are recognized as the top quality control gear in the market and, among other advantages, they stand out for their capability to integrate inside the same form factor wireless communication functionality at multiple frequencies without additional external boxes. Through its CellLED® project, LEDCOM is also turning the street lighting system into a pervasive next generation mobile communications infrastructure.
